Response to Amendment/Response to Arguments

1. Amendments received on 05/08/2009 have been made of record.
2. Applicant's arguments filed 05/08/2009, with respect to Claims 1-29 have been fully considered and are persuasive. The rejection(s) of Claims 1-29 has been withdrawn and the amendments are deemed to place the claims in a condition for allowance.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:
4. The closest prior art is considered to be Aoyama (6,383,620), Nakamura (2001/0035929), and Feiring (6,593,058).

Applicant's independent claims 1, 5, 11, and 18 are toward an anti-dazzling film with:

(1) low-refractive index layer and

(2) anti-dazzling film that comprises:

(a) a triacetylcellulose film and

(b) an anti-dazzling layer comprising

(i) a light transparent acrylic resin

(ii) plastic particles between 0.5 to 10 micrometers, and

(iii) a copolymer of (meth)acrylic acid with at least one perfluoroalkyl group and (meth)acrylic acid with at least one bornane ring

The closest prior art fails to disclose or suggest an anti-dazzling film comprising a bornane-ring containing film in combination with the other structural element recited in the claims.

Aoyama ('620) teaches an anti-reflection film having a TCA film, and an anti-reflection film of acrylic and copolymer of a (meth)acrylic acid perfluoroalkyl and alicyclic polymer but fails to specifically disclose a low-refractive index layer and plastic particles. While Aoyama teaches alicyclic polymers, Aoyama fails to specifically teach that these polymers have at least one bornane ring, and further that such copolymers may be mixed with acrylic resins and plastic particles.

Nakamura ('929) teaches an anti-reflection film having a TCA film, a low-refractive index layer, and an anti-dazzling film layer comprising: (i) an acrylic resin, (ii) plastic particles in the Applicant's claimed size range, and (iii) a polymer comprising perfluoroalkyl groups. Nakamura fails to specifically disclose a copolymer of (meth)acrylic acid with perfluoroalkyl groups and (meth)acrylic acid with at least one bornane ring.

Feirling ('058) was used to teach copolymer compositions of (meth)acrylic acid having at least one perfluoroalkyl group and (meth)acrylic acid with at least one bornane ring. However, Feirling neither discloses that such compositions are admixed with acrylic resins and plastic particle fillers, nor teaches that such compositions are used in anti-dazzling film formulations.

It would not be obvious to the skilled artisan to mix the composition taught by Feirling with the acrylic and plastic particle containing resin taught by Nakamura because there is no motivation for doing so, as Feirling is concerned with using such copolymer compositions in photoresist applications.

None of the prior art specifically teaches the claimed structure and composition, and it would not be obvious to the skilled artisan to arrive at the presently claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to APRIL C. INYARD whose telephone number is (571) 270-1245. The examiner can normally be reached on Monday - Thursday 8:00 AM - 5:00 PM EST.
